증례 (**or** 수술술기) : It is not easy to identify the exact pain producing structures in degenerative spinal disease. Intervertebral disc, facet joint and sacroiliac joint have been widely known as major causes of chronic low back and referred pain. The afferent sympathetic fibers which pass through the L2 spinal nerve root were the cardinal pathway of sensation from the above three structures.

acknowledgment :

L2 root block, chronic low back pain, intervertebral disc, facet joint, sacroiliac joint
