증례 (**or** 수술술기) : Osteoporosis, osteoporotic spinal fracture, risk factors, nonunion. OSF is a common problem in the aged society, and most OSF can be successfully treated with conservative treatments. In the limited cases, progressive collapse and neurologic complications related to nonunion following OSF can be major issues. However, there are few reports regarding the risk factors for these complicated OSF.

acknowledgment : This study is partially supported by research grant of Dae-woong Pharmacy Co. No other funds or benefits in any form have been or will be received from a commercial party related directly or indirectly to the subject of this study.
