**증례 (or 수술술기) :** Postoperative osteogenesis in C2 lamina after dome-like cervical laminoplasty is often observed during follow-up. However, there have been no reports that evaluated the characteristics of the osteogenesis. The purpose of this study was to investigate the radiographic features and clinical significance of the osteogenesis after dome-like cervical laminoplasty. Postoperative osteogenesis in C2 lamina after dome-like cervical laminoplasty is often observed during follow-up. However, there have been no reports that evaluated the characteristics of the osteogenesis.
